QRST DEVICE APPLICATIONS

OSTEOARTHRITIS

OVERVIEW

Osteoarthritis is one of the **most common degenerative joint disorders** affecting millions worldwide. It primarily occurs due to the gradual wear and tear of cartilage the smooth tissue that cushions the ends of bones in joints. When this cartilage breaks down, it leads to **pain, stiffness, swelling, and reduced movement** in the affected area. The joints most often impacted include the knees, hips, spine, shoulders, wrists, and ankles.

QRST treats this condition at the **cellular level by activating degenerated cells** in the cartilage of the affected areas. Treatment is more accessible without side effects or invasive procedure making it a viable form of medical treatment.

CAUSES

OBESITY

LACK OF EXERCISE

POSTURE ISSUES

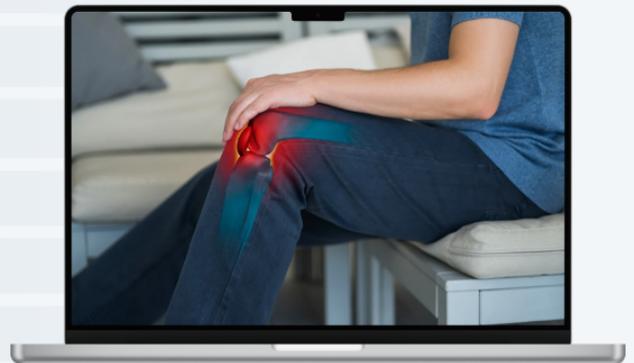

UNTREATED INJURIES

REPETITIVE STRAIN

AGE RELATED DEGENERATION

SYMPTOMS

PERSISTENT JOINT PAIN AND STIFFNESS

SWELLING AROUND AFFECTED AREAS

RESTRICTED OR DIFFICULTY IN BODY MOVEMENTS

GRINDING OR CRACKING SOUNDS DURING MOVEMENT

JOINT DEFORMITY IN SEVERE STAGES

OSTEOARTHRITIS

TYPES

KNEE OSTEOARTHRITIS

Causes pain, stiffness, and swelling due to cartilage wear in the knee joint.

HIP OSTEOARTHRITIS

Leads to pain in the hip, groin, or thigh and restricts walking.

SPINAL OSTEOARTHRITIS

Affects spinal cartilage, causing back stiffness and nerve compression.

SHOULDER, WRIST, AND ANKLE OSTEOARTHRITIS

Usually caused by repetitive motion or previous trauma.

BENEFITS

REDUCTION IN JOINT PAIN

DECREASED INFLAMMATION

GOOD WEIGHT-BEARING ABILITY

DISC HYDRATION

REDUCED CREPITUS

BETTER QUALITY OF LIFE

PHYSIOTHERAPY + NUTRITION

QRST jumpstarts your body's ability to repair and regenerate. But to get the most out of the therapy, two support systems are essential:

PHYSIOTHERAPY

Aids and assists in improving mobility, corrects posture, strengthens muscles, and ensures proper recovery.

BALANCED NUTRITION

Fuels the body with vitamins, minerals, and proteins that help tissues heal faster and stay strong.

When combined, they create a powerful foundation that amplifies the effects of QRST and leads to better, long lasting outcomes.

OSTEOARTHRITIS

TREATMENT

QRST Therapy for the treatment of Osteoarthritis uses Quantum-Bio Regenerative Stimulation Technology to activate cartilage regeneration. The therapy delivers unique energy frequencies that interact with water molecules in the affected tissue, stimulating live cells and initiating the regeneration process.

STAGES

1

CLINICAL EVALUATION

Doctors review diagnostic scans and assess the condition to understand the severity and affected regions.

2

PERSONALISED TREATMENT PLAN

A customised treatment card is created for each patient, tailored to their unique needs and targeted joint areas.

3

PRECISION ENERGY TARGETING

Therapy begins with focused delivery of bio-magnetic energy to the affected cartilage area, laying the foundation for cellular repair.

4

MOLECULAR STIMULATION

The therapy activates water molecules within the cartilage, preparing the environment for deeper regenerative responses.

5

CELLULAR REGENERATION

The energy directly interacts with viable live cells in the tissue, promoting active repair and the rebuilding of damaged cartilage.

6

INITIAL SYMPTOM RELIEF

Patients begin experiencing noticeable pain relief and improved mobility just days after completing their sessions, depending on the case severity.

7

LONG-TERM REGENERATION

The regenerative process continues even after therapy ends, with tissue healing progressing over 12 to 24 months for lasting relief.

SPINAL DISORDERS

OVERVIEW

The spine serves as the **body's central support structure**, connecting the skeleton and enabling motion, balance, and nerve function. Degenerative conditions or injuries to the spine can lead to **chronic pain, stiffness, and restricted mobility**.

QRST Therapy offers a non-invasive, regenerative solution for a wide range of spinal conditions including **herniated discs, disc protrusions, degenerative disc disease, and chronic lower back pain**. By targeting the **hydrogen atoms within spinal discs**, QRST stimulates cellular activity, promotes disc hydration, and supports long-term regeneration of spinal tissue, helping patients experience relief without surgery.

CAUSES

POOR POSTURE

INJURIES OR UNTREATED TRAUMA

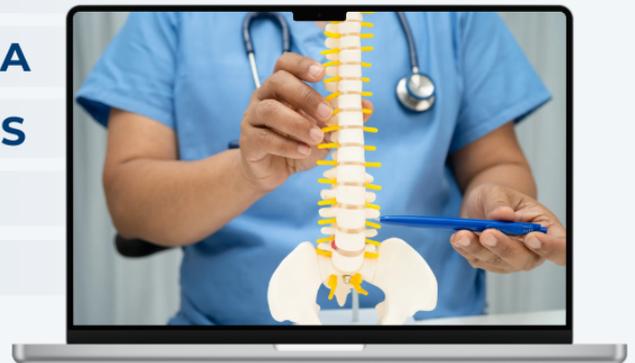

HIGH IMPACT SPORTS / ACTIVITIES

LONG SITTING HOURS

AGE RELATED DEGENERATION

SYMPTOMS

PERSISTENT BACK PAIN

RESTRICTED MOVEMENT AND STIFFNESS

NUMBNESS OR TINGLING RADIATING TO LIMBS

DEPENDENCY ON PAINKILLERS DUE TO CHRONIC PAIN

LOSS OF FLEXIBILITY OR BALANCE

SPINAL DISORDERS

TYPES

DISC BULGE AND HERNIATION

Spinal disc protrudes outward, putting pressure on nearby nerves.

SPINAL STENOSIS

Narrowing of the spinal canal that compresses nerves.

DISC DEGENERATION

Gradual wear and tear of spinal discs over time, leading to reduced flexibility.

MICRO SPINAL FRACTURE

Tiny cracks in the spinal bones, typically caused by stress or trauma.

SPINAL BONE BRUISING

Localized injury to the vertebral bone tissue, without visible fracture.

BENEFITS

REDUCED INFLAMMATION

PAIN REDUCTION

ENHANCED MOBILITY

DISC HYDRATION

BETTER SPINAL ALIGNMENT

IMPROVED NERVE FUNCTION
